

Hydrovane V Series Rotary Vane Compressor

Hydrovane (Redditch, Worcestershire, UK) has announced its new Hydrovane V Series line of rotary vane compressors. Small, quiet, and affordable, Hydrovane compressors are all direct drive with no belts or gears to maintain. They operate at 1760 RPM's for low stress, noise, and long compressor life. TEFC motors are standard. The V Series are available as tripod mount, on horizontal or vertical tanks, or in duplex configurations when extra air is needed. Duplex packages are provided with an alternating control panel that provides automatic lead-lag alternation of the system or the air of both compressors for if demand exceeds the lead machine.
