

Liquid Mist Flow Monitors From FilterSense

FilterSense's (Beverly, MA)

Liquid Mist Flow Monitors are used to monitor the outlet of all types of mist eliminators for mist carryover and mist filter failure detection. The monitors employ an induction-sensing principle and a probe to ensure high reliability even in harsh environments such as acid mist, oil mist, or water droplets in high pressure pipes. Outputs include relay contacts, 4-20mA, Modbus and ethernet. Benefits include process analysis and control, environmental protection, contamination detection, and equipment protection.
