

StressPly E Modified Bitumen Membrane

The newest StressPly E (Environmental) modified bitumen membrane from **Garland** (Cleveland, OH) is a high-strength, puncture-, and fatigue-resistant membrane. The new StressPly E membrane retains the high-performance capabilities of earlier versions of the product, but incorporates recyclable materials for increased sustainability. The membranes can be installed using Garland's Green-Lock Membrane Adhesive for 100 percent VOC-free, odor-free application. The StressPly membranes can be applied hot or cold and are designed for use as the top component in built-up roof applications. They can also be used to add extra durability in a two-ply flashing system or to repair splits, cracks, and other deteriorated areas in existing asphalt-based roofing systems.
