

VAC-U-MAX Model 860/02

The VAC-U-MAX Model 860/02 from **VAC-U-MAX** (Belleville, NJ) uses the VAC-U-MAX Air-Powered Vacuum cover with manual pulse-jet filter cleaning and non-stick filtration that captures 99.9 percent of particles as small as 0.5 microns. The portable frame includes a collection hopper with automatic discharge valve and polybag loading accessory. When the vacuum is turned off, the collected powder automatically discharges into an off-the-shelf static-conductive polybag. The Model 860/02 vacuum has a fully grounded accessory kit, static-conductive filter media, and anti-sparking material inlet to allow the vacuum to be used in Class II, Division 2 environments as required by OSHA.
