

New Low Flow Centrifugal Pump

Ruhrpumpen (Tulsa, OK) has added the new centrifugal pump model CPP-L to its standard product line. The CPP-L is the low flow version of the CPP-21. The new pump complies with the ANSI B73.1 Standard and can be used to replace existing equipment without piping or base changes. The radial vane impellers for the CPP-L are designed to provide better hydraulic control and reduce the thrust load to prolong the bearing and seal's life.
