

Tolomatic IMA55 Actuator

Tolomatic (Hamel, MN) now offers a larger version of its integrated-motor rod-style actuator that is capable of delivering up to 3,000 pounds of force with a standard ball screw. The Tolomatic IMA55 actuator is designed for pressing, clamping, spot welding, and volumetric filling applications. The IMA55 features a hollow-core rotor design that allows the nut of the screw to pass inside the rotor, creating a compact package and decreasing overall actuator length by as much as 18 inches. Able to move at 12 inches per second, the IMA55 actuator is available with a choice of motor windings optimized for 230 or 460 VAC in any incremental stroke length from 6 to 18 inches.
