

Application-Based Product Sizing

Thomson (Wood Dale, IL) has introduced Linear MOTIONEERING: Ball and Lead Screws, a new web-based sizing and selection tool to help machine builders quickly specify the right ball or lead screw from Thomson's range of inch and metric screws, to satisfy specific application performance requirements. Users choose from "Application-based Product Sizing," "Product Selector," or "Part Number Search" modes and enter a few parameters to receive downloadable 2D and 3D models, and detailed product specifications. The program also provides pricing information, and ordering and delivery information for the optimal ball or lead screws for the application.

To find your screw, go to www.thomsonlinear.com [1].
