

Assembly Lifters

The VM-Series Assembly Lifter from **Anver Corporation** (Hudson, MA) is a hoist-based, vacuum powered unit that features a custom pick-up suction pad for lifting compact metallic loads and provides a manual tilt mechanism for pick-and-place applications. Suitable for assembly operations and feeding machining centers, this lifter-tilter eliminates metal-to-metal contact and the problem of magnetization. Allowing one person to safely handle small parts weighing up to 250 pounds, the Anver VM-Series Assembly Lifter vacuum head uses compressed air and the venturi principle for securely holding the load while the electric chain hoist provides up/down movement to maintain position without drift when stopped.
