

Detcon RD-64X Gas Sensor

Detcon (The Woodlands, TX) has introduced the Detcon Model RD-64X, a read-only, remote display unit designed to monitor real time status of a wide range of gas detection sensors and controllers. The 64-channel system incorporates master and slave communication ports, allowing for multiple remote display modules throughout critical management stations in heavy industrial environments. The Model RD-64X features a non-intrusive magnetic interface and backlit LCD that simplifies operation and configuration. During normal operation, the unit displays real-time status updates for up to eight field devices simultaneously and continuously auto-cycles through each active channel screen for constant, up-to-date readings. In an alarm condition the display automatically switches to the screen showing the device in alarm.
