

## Wireless Drum Racking

Workers can now perform drum racking with wireless drum tilt function for maximum control, precision, and efficiency with advancements in drum handling from **Morse** (East Syracuse, NY). Morse rackers slide quickly onto forks to move drums on and off racks, pallets, and more with virtually zero clearance between drums. Safety is enhanced and drums may be handled with faucets in place so that drum racks add functionality as dispensing stations. Tilting control is easily alternated between the wireless option and the direct wire pendant option as applications require. Racker response is brisk and without interference from other RF sources due to a strong 300 foot range, and 900MHz frequency hopping.
