

Magna-Rails

Eriez (Erie, PA) Magna-Rails and Magna-Rolls magnetically convey, transfer, control, elevate, reposition, hold, or orient basic ferrous materials and finished parts. An ever-present need within many processing industries is the ability to hold steel parts firmly on moving belt conveyors. Such conveyors, fitted with Eriez Magna-Rails, ensure that parts do not fall off, even when being elevated or lowered. These magnetic elements, positioned under conveyor belts and secured by mounting brackets, provide a safe, positive hold for ferrous parts—cans, sheets, nails, stampings, finished parts, even scrap—at high speeds in any direction, even up inclines as steep as 90 degrees.
