

Power Design Pro

Generac Power Systems, Inc. (Waukesha, WI) has enhanced its award-winning Power Design Pro generator sizing software with a new exhaust piping module. This exhaust piping module allows users to enter the length of the exhaust piping run and the number of various elbow types. It then automatically selects the appropriate exhaust piping for a selected generator. The module also allows users to manually select the pipe size, after which it calculates the engine's exhaust back pressure. The exhaust piping module supports single and dual exhaust engine configurations.
