

Contractor Lift

Sumner Manufacturing (Houston, TX) has introduced the compact 2416 Contractor Lift for mechanical contractors to quickly and easily move loads of 450 pounds up to 17 feet vertically with forks reversed. The 2416 extends upon Sumner's popular 2412 Contractor Lift, but adds an extra mast and stabilizer legs, enabling users to lift more weight higher. The 2416 utilizes four mast sections that extend or lower as the user cranks the lift winch and a reversible fork that can be fitted with optional fork extensions, pipe cradles, or a 24- by 28-inch steel tray. The 2416 features a double-handle at the top of the lift for easy maneuverability and casters that swivel independently for multi-directional positioning.
