

## Flexible Material Handling

AZCO Corporation

**AZCO Corporation** (Fairfield, NJ) makes a complete line of module units that feed and cut flexible materials. The units can be configured to provide custom solutions using standard, off the shelf modules. The units are made with permanently sealed and lubricated bearings, color touch screens for operator interface, and stepper or motor drive systems for precision indexing and feeding of material. Custom solutions are made simple by utilizing standard modules or modifying standard modules to meet specific needs. AZCO Corporation builds a variety of units, including unwinds, slitters, feed and cut-to-length assemblies, punches, and rewinds. The units have mounting holes for quick installation into any piece of equipment or into any process.
