

Gas Standards Generator

KIN-TEK

KIN-TEK's (La Marque, TX) Span Pac™ "I" Industrial Gas Standards Generator uses Trace Source™ permeation tubes to produce precise, accurate calibration gas mixtures with concentration traceable to NIST. Concentrations from low parts per billion to over 1000 parts per million are dynamically blended as needed, directly from the pure component compounds. No interstage mixtures are required. The Span Pac™ I is easy to use, safe, and specifically designed for field mounting with process analyzers. It is housed in a rugged NEMA 4 specification cabinet. Optional "Z" or "X" purge systems allow service in Div II or Div I hazardous atmospheres. Single and dual channel Models are available. Trace Source™ Permeation Tubes are available for over 500 key vapors, including most industrial toxicants.
