

Mega-Pro Heavy Duty Door

TMI, LLC

Over time, excessive workflow can damage a building's infrastructure, especially its doors and passageways. To accommodate these workflows, **TMI, LLC** (Pittsburgh, PA) has developed its most rugged and durable swinging door ever, the Mega-Pro Heavy Duty (HD). The new Mega-Pro HD is designed to handle the heaviest levels of forklift and mechanized traffic, while separating a building's environments and controlling temperatures, without impeding traffic flow. The Mega-Pro can be used in doorways up to 10 feet wide and 10 feet high, and features heavy-duty galvanized steel hardware that attaches to crystal-clear, 3/8 inch-thick industrial-grade PVC that is available in regular and low temperature grades. All door components are housed within a heavy-duty frame to prevent the infiltration of dust, debris and other contaminants.
