

Wireless Environmental Sensor

Predictive Sensor Technology

Predictive Sensor Technology (Lynchburg, OH) has introduced its Wireless Environmental Temperature, Humidity, and Dew Point Sensor/Transmitter, which alerts the user via text or email when pre-set targets are reached. Wireless condition monitoring can help control critical parameters and eliminate surprise changes in conditions detrimental to the process. PST's proprietary iStatus™ software is the heart of the PST system. iStatus™ checks each data transmission against user-configured alarm thresholds. iStatus™ automatically logs data at user-configured intervals in a SQL database. Users can run pre-configured reports to view trends or program their own in the SQL database.
