

# Programmable Stripping Machine

Schleuniger

The UniStrip 2550 from **Schleuniger** (Manchester, NH) is a fully programmable stripping machine, offering high precision and flexibility, according to the company. It strips wires ranging in size from 32 - 10 AWG and jacketed cables up to 0.22-inches in diameter. The machine comes standard with V blades and can also be equipped with radius, die, or flat blades depending on the application. These special blade types are used for stripping wires with difficult to strip insulations such as Teflon, Kapton, Kynar. An integrated library of standard wire sizes and an intuitive menu-guided touchscreen interface make the UniStrip 2550 a user-friendly machine. All parameters are fully programmable and can be stored or recalled in seconds.
