

Retractable Belt Lanyards

Hammerhead Industries

For maximum durability and safety, **Hammerhead Industries** (Ventura, CA) can mount any of their 2-axis retractable lanyards directly to their webbing belt. The 2-Axis retractor series permits 360 degree rotation on the belt as well as 180 degree swing-away from the body for a full-range of motion. Once mounted on the belt, the retractor can be moved to different positions but remains impossible to dislodge, according to the company. The retractor/belt combination can be user-converted to a slide on/off unit for any belt. Requiring a minimum order of 50 units, the tethering system is ideal for working in close quarters or climbing. The retractable tether's ultra low profile keeps tools and instruments close to the body while allowing accessibility in all directions.
