

Service Ordering System

POOL4TOOL

POOL4TOOL (Farmington Hills, MI) has presented a new module for purchasing: The POOL4TOOL service ordering system, which provides flexible support to deal with the challenges which can arise during the service procurement process. The supplier can confirm the completion of rendered services (on-site measurement) directly in the portal. After a workflow-directed release and auditing process, a confirmation directly from the authorized user will indicate whether the calculated payments are acceptable or not. After that, the service entry sheets are automatically posted to the order in SAP, so the bill can be accessed easily later. Additional expenditures, such as manual changes to the order or complex invoice verifications, can be eliminated. Contracted work hours can also be easily confirmed without service and payment specifications.
