

# Drum Handling Cones

Morse

**Morse** (East Syracuse, NY) Asymmetrical Cones for 55-gallon (208 liter) steel or fiber drums facilitate lifting, tilting, and dispensing dry contents from drums. Cones are available with iris valve, slide gate, a valve flange, or a 6-inch diameter opening. Choose from either carbon steel drum cones painted blue, or drum cones made of type 304 stainless steel with aluminum bodied iris valves. Asymmetrical cones work with many Morse models of drum handlers. The asymmetric (offset cone shape) design enables cones to be used with a variety of unmodified below-hook types of drum handlers. It also extends pouring reach and minimizes the need to fully invert the drum to pour.
