

# Single-Phase Compressor Control

Ingersoll Rand

**Ingersoll Rand** (Davidson, NC) now offers a newly improved single-phase control scheme for its 5 and 7.5 versions of the small UP6 5-15c line of air compressors, says the company. The UP6 single-phase compressors are versatile compressors, ideal for small manufacturing shops, vehicle services environments, paint booths, and general industrial applications up to 28 cfm. With food grade coolant and cleanup equipment, these compressors are also ideal in small food and beverage applications. Ingersoll Rand has added a run-on timer and load/unload and blowdown solenoids to improve the reliability and performance of single-phase units in these applications.
