

Arc Armor Welding Helmets

Miller Electric Mfg. Co.

Miller Electric Mfg. Co. (Appleton, WI) has introduced the redesigned Arc Armor® Titanium Series™ welding helmets for heavy-use/high-amperage applications in fabrication, manufacturing, and construction. New features include Miller-exclusive InfoTrack™ technology that allows the operator to track arc-on time and provides a digital clock with the ability to set alarms and timers. The new external grind button featured on the Titanium 7300™ and Titanium 9400™ allows welders to switch to grind mode without lifting their helmets. All-new digital controls with larger displays and intuitive design allow the welder to adjust modes, shade levels, delay and sensitivity, and a new three-year warranty matches the longest of any welding helmet in the industry today, says the company.
