

Cutting & Grinding Wheel

Metabo Corporation

Metabo Corporation (West Chester, PA) now offers a combined cutting and grinding wheel. The Combinator, designed for performance and safety, eliminates the need to change abrasive wheels during cutting and grinding applications, explains the company. With the Combinator wheel, one grinder can be used for two applications. The Combinator is ideal for cutting, deburring, and light grinding. At 5/64-inch thick, it cuts quickly and with three full layers of fiberglass; safety is designed into the wheel for grinding applications. Available in 4½ -, 5-, and 6-inch type 27 versions, the Combinator employs an improved abrasive/resin formulation for fast cutting with increased wheel life, as well as strength and rigidity for grinding / metal removal applications.
