Diamond Flex-Hones

Brush Research Manufacturing

Brush Research Manufacturing (Los Angeles, CA) presents the newest innovation in the continuing evolution of its Flex-Hone technology, says the company: Diamond Flex-Hones. These new tools are designed primarily for deburring, edge blending, and surface finishing in hard materials like carbide, ceramic, and aerospace steel alloys. BRM says it has engineered these tools using resin bond diamond crystals that have high friability, resulting in a tool that is free cutting and able to provide a quick cut-rate and optimal finish. All diamond tools are made with premium nickel coated abrasive to help heat dissipation and bond retention. Sizes from 4- to 20 millimeters are standard in three different mesh sizes.
