DMQX Bead Milling System

Union Process, Inc.

Union Process, Inc. (Akron, OH) has launched the DMQX™ Horizontal Bead Milling System, which features an enhanced disc/rod design that significantly improves grinding efficiency, says the company. The new design can dramatically increase milling effectiveness resulting in shorter milling time and lower shaft speeds. The result is less wear on seal faces and other wear parts, which in turn results in significant cost savings. The unique design of the mill allows for a fast and efficient solution for producing materials in the single micron and even nanometer range, all with the cost-effective advantages of circulation grinding.
