

Rooftop Ventilation Units

Greenheck

Greenheck's (Wausau, WI) new rooftop ventilation unit, Model RV/RVE, fully conditions and controls any mixture of outdoor and return air, says the company. Designed for rooftop installations, Model RV/RVE is ideal for HVAC systems in commercial or institutional applications including schools, offices, and industrial buildings. The pre-engineered system features two-inch double-wall construction, coupled with direct-drive plenum fans, heating options (indirect gas furnace, hot water, or electric), cooling options (packaged DX, chilled water, or split DX), and an optional energy wheel (Model RVE). Performance capabilities up to 9,500 cfm make this equipment flexible enough to meet the demands of today's heating, cooling, dehumidification, and ventilation requirements.
