

Automatic Strapping Machine

Dynaric Inc

Dynaric Inc (Virginia Beach, VA) has introduced the ST1SS fully-automatic high speed strapping machine for use in industries with harsh packaging environments. The ST1SS joins Dynaric's line of stainless steel strapping machines already being supplied to companies processing products in wet cold environments. With the addition of the ST1SS, processors and manufacturers can realize costs savings of 10 to 25 percent with higher production speeds and ability to use Dynaric's more cost efficient XL strapping products, according to the company. The ST1SS is capable of strapping 35 single strapped packages per minute with strap sizes ranging from 5 to 9 millimeters wide. The ST1SS has variable speed power table conveyor belts and is available with optional package compression and package stops.
