

Magliner Coolift Delivery

Magline

Magline (Standish, MI) has introduced the Magliner® Coolift® Delivery System. This system allows distributors to deliver more product in less time, combining an easily maneuverable and high capacity hydraulic lifting truck with integrated plastic “half” pallets for improved safety and efficiency, according to the company. With the Coolift® Delivery System, product can be delivered to the store with up to 50 percent reduction in driver product touches. Orders are built directly onto a Coolift pallet inside the warehouse, and then loaded into trailers using traditional fork lifts with Coolift Pallet Adapters. At the delivery location, drivers can transfer product to its final destination through a traditional door, because of the Coolift pallets’ compact size.

Check it out at www.magliner.com [1].
