

## Moisture-Proof Sensors

ASM

Oil platforms, shipyards, and offshore engineering companies have special requirements for sensors that can meet the harsh environments they have to work in. **ASM** (Moosinning, Germany) has engineered the WB100M tape sensor for such applications. The fully encapsulated electronics ensure that no moisture can penetrate the critical areas where as water is allowed to freely flow through the mechanical areas with no effect due to the use of materials specifically selected to work well in a salt water environment, resulting in the IP68/69K enclosure ratings. The WB100M is available in a range of measuring lengths from 2000 up to 10000 millimeters and a wide range of analog or digital outputs including CAN SAE J1939.
