

Shell Tellus Hydraulic Fluid

Shell Lubricants

Shell Lubricants (Houston, TX) has released its new Shell Tellus S3 M Hydraulic Fluid, which uses a unique, advanced, zinc-free, anti-wear technology to deliver up to twice the life of Shell's previous Zinc-free product, improved pump protection, and system efficiency, says the company. The new hydraulic fluid is engineered to work under demanding temperature and operating conditions, and is ideal for most manufacturing applications including plastic injection molding and mobile equipment operations. Shell Tellus S3 M is designed to help maximize productivity by ensuring equipment meets or exceeds its design capabilities. With improved air release and filterability characteristics (relative to the industry minimum requirements), the product allows for more efficient hydraulic power transmission, eliminates low pressure loss, and offers a more efficient operation.
