

# Electronic Torque Wrench

GearWrench

**GearWrench®** (Sparks, MD), a hand tool brand from Apex Tool Group, has announced its Electronic Torque Wrench with Angle Measurement is now available in the industrial channel. The product is ideal for applications requiring torque specifications that include tightening to an angle beyond a specified torque value. The wrench provides the user with +/- 2 percent accuracy clockwise and +/- 3 percent accuracy counterclockwise, and is more accurate than mechanical torque wrenches, according to the company. The angle mode delivers +/- 1 percent accuracy. Productivity is also increased as the user easily converts between three units of measure: ft/lbs, in/lbs, and Newton meters.
