99 Series Casters

Caster Concepts

Caster Concepts (Albion, MI) has developed the 99 Series for extreme situations where payload capacity exceeds typical ranges. The Caster is rated to 35,000 pounds in a standard configuration and in excess of 50,000 pounds in custom configurations, one of the highest in the industry, according to the company. The 99's dual load race design assures smooth rotation and superior load capacity on any type of surface and under the most demanding conditions. Priced like mass-production models, the 99 Series can be configured with single or dual wheels, with diameters of 10 to 22 inches. Custom configurations can accommodate wheels over 30 inches in diameter and multiple wheel configurations when application calls for it.
