Electric Motor Handheld Tester

ALL-TEST Pro, LLC

New patented, handheld tester from **ALL-TEST Pro, LLC** (Old Saybrook, CT), is easy to use and gives immediate information about the complete condition of the stator, rotor, and connections, according to the company. It tests for contamination, internal stator windings shorts, ground faults, rotor problems, and bad connections—including the cable. Optional software can be downloaded with the results comparing prior tests with the present test for detecting early faults and for printing detailed reports. The instrument takes the guesswork out of evaluating the condition of electric motors. Sort incoming or perform quality control for repaired motors, trouble shoot, or compare base line tests to the latest test to find early faults not found by using other instruments.
