Fall Protection Grating System

The Bilco Company

The Bilco Company (New Haven, CT) has released its redesigned fall protection grating system. The system provides a permanent means of fall protection for the company's line of single and double leaf floor access doors and meets OSHA standard 29 CFR 1910.23 requirements. The new system is constructed of light-weight aluminum grating and stainless steel hardware for corrosion resistance. The grating panel is supplied with a safety yellow powder coat finish, making it more durable, attractive, and extremely scratch-resistant, says the company. The system also features a stainless steel hold-open device that secures each panel in the full 90 degrees position, maximizing the door's usable access area.

For more information on Bilco's complete line of commercial access products, visit www.bilco.com [1].
