

Wireless Test Tools

Fluke

Fluke Corp. (Everett, WA) has introduced the Fluke® CNX Wireless System, the first set of test tools that wirelessly connects multiple measurement modules and sends simultaneous readings to a master device up to 20 meters away, allowing users to troubleshoot problems quickly and efficiently, according to the company. The rugged, customizable tool set allows users to choose various measurement modules based on their specific troubleshooting scenario. By leveraging the most common electrical test tool—the multimeter—the Fluke CNX system allows technicians to extend their existing capabilities and skills, helping them meet market demand for more complex three-phase work without re-training on more complex test tools.
