

Adjustable Voltage Control

Magnalight.com

The TX-1000VA-4XAO power transformer from **Magnalight.com** (Kemp, TX) provides operators with an effective way to reduce common 120 or 240 VAC current to 12/24 VDC or 12/24 VAC depending upon configuration, in order to power lights and equipment that require low voltages, says the company. This power transformer features an adjustable voltage controller that allows operators to increase the voltage levels to compensate for voltage drops that occur when very long cords are used. The transformer in this unit is mounted within a weatherproof enclosure that is NEMA 3R rated giving it protection against driving water, and a raised base protects the unit from standing water as well.
