Heavy Duty Floodlighting

Larson Electronics LLC

Larson Electronics LLC (Kemp, TX) has announced the 6000 watt CM-4X15M-25-480V-3P for operators looking for portable 480 volt work site lighting. Equipped with four 1500 watt adjustable metal halide light heads, this work site lighting system can be used from the ground or elevated for work site area illumination. Constructed of heavy duty aluminum tubing, this floodlight system is built for durability and demanding conditions. The design of the light enables the operator to pick up the system with a crane as easily as using it from the ground, since the light heads can be pointed directly up or down, says the company. Larger floodlight systems, including as many as 24 light heads, alternative voltages, and low wattage LEDs are available in a similar configuration.
