## I/O Integration

INTEG Process Group

**INTEG Process Group's** (Gibsonia, PA) JNIOR functions as both basic I/O for integration with another application or system and as a stand-alone controller capable of running its own software. Each JNIOR contains a built-in controller, 10/100 Ethernet port, mix of I/O signals, built-in web pages for easy configuration, monitoring and manual control, ability to communicate simultaneously to multiple devices, communication drivers (TCP/IP, DLL, OPC Server), data buffering, and logging capabilities to a PC or the cloud, I/O expansion, e-mail notification of alarms and events, rugged packaging, and industry certification.
