

KenFeed Milling Solution

Kennametal

The New KenFeed 2X Milling Solution from **Kennametal** (Latrobe, PA) is the latest development in high-feed for light to heavy end milling operations. While the previous generation of KenFeed tooling required three different insert sizes, the new KenFeed 2X requires only one. These new inserts are engineered to provide superior material removal rates and productivity at high feeds for roughing operations, according to the company. Each double-sided trigon insert offers six cutting edges for better cost per edge position with full usage. The thick design of the inserts provides strength and reliability, making them capable of withstanding high-feed operations. Additionally, it is the ideal solution for deep cavities or milling operations from 3 x D.
