Lean Tools

Creform® Corporation

At ProMat 2013, **Creform® Corporation** (Greer, SC) will demonstrate how its products and engineers help manufacturers strengthen their Lean and continuous improvement programs. Some of Creform's latest products that support Lean will include its most sophisticated AGV drive unit, the BST NSI Tugger model, its unique heavy-duty 42mm pipe & joint system, and Placon® Roller Conveyors. The BST NSI AGV has a sophisticated control system that can mobilize an entire fleet of carts for up to 50 courses, 128 commands each, programmable by onboard HMI touch screen or PC, says the company. It can also be part of a managed AGV system with traffic control. Other items shown will be concepts and designs for many material handling structures and systems, all designed to support continuous improvement.
