Loctite® Threadlockers

Henkel Corporation

A new website from **Henkel Corporation** (Rocky Hill, CT) is designed to educate end-users on the problems that threadlockers solve, how to apply and remove threadlockers, the correct strengths for specific applications, and provide technical information on specialty grades for specific industrial applications. Designed to reduce costs and enhance performance, Loctite® threadlockers can dramatically increase the reliability of threaded assemblies used in applications ranging from heavy industrial equipment to delicate electronics. When restricted from oxygen, these adhesives solidify in the threads of the fastener, locking the nut and bolt together and protecting against vibrational loosening and thermal expansion. Threadlockers also seal assemblies against corrosion and leakage.

Check out the new site at www.loctitethreadlockers.com [1].
