

Propane Safety Valve

Accu-Flex-Safety Inc.

Statistics indicate that almost every forklift operator has had negative experiences (getting sprayed with liquid propane gas (LPG)) while changing a cylinder. **Accu-Flex-Safety Inc.** (Vaughan Ontario, Canada) has the solution! Placing the Cormack Propane Safety Valve on the hose prevents LPG from spraying onto the operator and installation takes just a few minutes. When the Cormack Valve is closed, it shuts off the LPG next to the coupler to prevent it from coming back through the hose in the event the cylinder seal fails. The fool-proof handle design covers the coupler so the operator cannot disconnect it in the open position. According to the company, the Cormack Propane Safety Valve reduces forklift incidents, increases LPG cylinder exchange safety, fits almost all forklifts, and increases productivity.
