

In-Sight® 7010

Cognex Corporation

Cognex Corporation (Natick, MA) has introduced the In-Sight® 7010, an entry level vision system developed specifically for inspection tasks where vision sensors are too limited and a standard vision system may not be cost effective. Every aspect of the In-Sight 7010 has been designed to make deploying a vision system easier than ever before, says the company. It is a completely self contained vision system that includes autofocus optics and integrated lighting in a compact, IP67 rated industrial housing. Applications can be configured quickly using the intuitive EasyBuilder® user interface. The vision library on the In-Sight 7010 has been simplified to focus on the tools most frequently used in straightforward vision applications.
