

High Density Storage

SpeedCell

The **SpeedCell** (Zeeland, MI) storage system is a high density warehouse storage system that saves time, space, money, according to the company. The system is made of an array of mobile vertical shelving columns made from anti-static, flame-retardant technical textiles that slide sideways to reveal more columns behind them. The company says that by installing the SpeedCell storage system into existing storage bays, warehousing operations can eliminate under-utilized space while allowing easy access to every item in storage. The system can be reconfigured to fit almost any size product, and is available in many arrangements.
