## Power Wrench Valve Actuator

Netherlocks

The **Netherlocks** (Houston, TX) Power Wrench portable valve actuator facilitates the operation of manual valves for process industry employees while contributing to safe working conditions, says the company. It is capable of opening and closing any size, type, or number of manually operated valves, making it a cost effective alternative to multiple actuators. The Power Wrench connects to valves by a bolt-on universal drive plate, allowing a single Power Wrench to operate multiple valves. It is pneumatically powered (4-7 bar) and safe for use in applications where explosive and/or flammable liquids or gasses are present.
