Build-A-Berm® Barrier Kit

New Pig Corporation

New Pig Corporation's (Tipton, PA) crush-resistant Build-A-Berm® Barrier Kit allows facilities to create a semi-permanent spill containment barrier around machinery or storage areas without the expense of building cement curbs or cutting and installing angle iron, says the company. The pliable open-cell PIG® Build-A-Berm® Barrier can be shaped to suit any application or environment and springs back into shape after being walked on or rolled over with light, wheeled equipment. The Barrier's high-visibility yellow color increases safety and its 18 ounce all-vinyl covering resists oils, coolants, and most chemicals. The PIG® Build-A-Berm Barrier Kit includes straight sections, corners, and Sili-Thane Sealant for fast, easy installation. The Berm can be easily removed with a flat-bladed shovel if containment needs change.
