End "Blind Corner" Collisions

Sentry Protection Products

Collision Sentry® from **Sentry Protection Products** (Lakewood, OH) can help reduce or eliminate "blind corner" collisions by providing a visual warning that alerts forklift drivers and pedestrians to approaching traffic, says the company. Collision Sentry uses infrared motion detectors to "see" around corners; when motion is detected on both sides of the corner—meaning a collision is possible—LED warning lights signal in both directions that there is traffic around the corner. Each patent pending unit is easy to install, self-powered, portable, compact, lightweight, and can be deployed immediately. Collision Sentry snaps on to pallet racks using integrated magnet mounts. Collision Sentry is pre-set and ready to use.
