

Rotary™ Cutters

Reed Manufacturing Company

Reed Manufacturing Company (Erie, PA) has introduced exclusive Rotary™ Cutters in new sizes for the biggest and smallest pipe diameters. The new RC42S Rotary Cutter is designed for manual cuts on 40 to 42 inch (1016 to 1067 millimeters) steel pipe. An included wrench is used to tighten the cutter and only 11.8 inches (300 millimeters) clearance is needed. Pipe snaps off squarely once the operator works the RC42S manually around the cut zone. On the small side of the spectrum, Reed is now offering an LCRC4 Low Clearance Rotary™ Cutter for 2 to 4 inch (60 to 125 millimeter) steel, cast iron, or ductile iron pipe. Also of heavy-duty construction, this junior-sized cutter requires just 4 inch clearance around the pipe to make the cut.
