

Longwave Infrared Thermal Imaging

FLIR Systems, Inc.

FLIR Systems, Inc. (Portland, OR) has introduced its new FLIR A5sc, A15sc, and A35sc longwave infrared thermal imaging camera kits. Designed for thermal bench top testing applications and easy deployment in tight machine vision locations, AX5sc cameras are available in a variety of pixel resolutions from 80×64 and 160×128 up to 320×256, and can meet the spatial resolution requirements of most applications, says the company. AX5sc thermal imaging cameras provide manufacturers with a non-destructive, non-contact T&M tool that can help eliminate temperature measurement guesswork, both during the product development stage and on the production line.
